

#### Submission Instructions:

- 1) You are allowed to change only the `translate ()` method. Do not change anything else.  
(Remember that Java, like most programming languages is case sensitive. Do not change the case of the package (`Assignment1`) or the top class (`Translator`). In Java, the name of the class must match the name of the file (including case).)
- 2) You must use a package called `Assignment1`. The `Translator.java` file you have been provided has this line. Do not delete or modify it.
- 3) Use ZIP to compress your code and submit it. Do not use any other compression algorithm; we can't guarantee that we can uncompress any arbitrary compression algorithm, so standardizing it to ZIP seems the best approach. Zip the folder that contains `Translator.java` (it *should* have the same name as the package; in our case, `Assignment1`), and submit it on BB. If the `Translator.java` is not contained in a folder called `Assignment1`, you have not used a package. You will need to fix that.

-----

#### Detailed Instructions on how and what to submit:

- 1) Eclipse creates a workspace directory (typically in your documents folder, but this can be overridden. Please verify on your local directory hierarchy where this workspace directory has been created).
- 2) Under the workspace directory, go to `,` and then to the directory `"src"`. (`,` is the name of the *\*project\** that you gave when you started the assignment. This is not the same as package name).
- 3) Under `/src`, you will find a folder called `"Assignment1"`. ZIP the folder `"Assignment1"` and submit it on blackboard. If you see `Translator.java` directly in `src`, this means you did not create a package.
- 4) Do not submit `.java` files directly on BB (BB sometimes messes the text up, and it might not compile). Do not zip only the `.java` file. Zip the folder that contains the `.java` file.
